Art Unit: 1631

**Part III DETAILED ACTION**

Claims 1-23 are currently pending.

**Restriction Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to ligand-binding domain of ultraspiracle (USP) protein, classified in class 530, subclass 350.
- II. Claims 8,9, drawn to computer-readable medium, classified in class 550, subclass 170.
- III. Claims 10,11, drawn to method for generating USP-LBD model. classified in class 702, subclass 27.
- IV. Claims 12,13, drawn to method for generating models of nuclear receptors, classified in class 702, subclass 27.
- V. Claims 14,16,18-20, drawn to method of finding ligands by database searching, classified in class 702, subclass 27.
- VI. Claims 15,17,21,22,23, drawn to method of finding ligands by modeling of compounds, classified in class 702, subclass 27.

Art Unit: 1631

The inventions are distinct, each from the other because of the following reasons:

The product of Group I and the computer medium of Group II are patentably distinct because the computer medium of Group II can contain any type of information, other than the instantly specified in Group I, and the structure information about the product of Group I is non-functional descriptive material which does not bring distinguishing characteristics to the medium of Group II.

Inventions I and III-VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, methods III-VI are alternate methods of using the product of Group I.

Inventions III-VI are related as independent methods which have different modes of operation, different method steps, different functions, or different effects.

Art Unit: 1631

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
